         This sequence represents a human prostate tumour specific gene, and can be used in the method of the invention. The method is for detecting prostate cancer comprises contacting a biological sample with an agent able to bind an immunogenic portion of a prostate protein (such as encoded by this sequence). An antibody which binds to an immunogenic portion of the prostate protein, and the method can be used to detect, monitor progression of, or treat prostate cancers. The antibody may also be conjugated to a therapeutic agent for use in therapy of prostate cancers. (Updated on 25-MAR-2003 to correct PR field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                  The present sequence is a new DNA which encodes an immunogenic portion of a prostate tumour protein. The encoded immunogen, or the DNA itself, can be used as a vaccine for the treatment of prostate cancer. The DNA was identified by analysis of a subtracted cDNA library obtained by subtracting a prostate tumour cDNA expression library with a normal tissue cDNA library
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 540
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes isolated polypeptides, comprising an immunogenic portion of a prostate tumour protein (FTP). The polypeptides and polymucleotides encoding them have cytostatic activity and can be used in vaccines and in gene therapy. The polypeptides and polymucleotides encoding them, antigen presenting cells which express the polypeptides and vaccines comprising them can be used for inhibiting the development of prostate cancer in a patient. The polypeptides can be used to generate antibodies or antibiditypic antibodies for passive immuno therapy. A portion of the polypeptides can be used as a probe or modulate the expression of the polypeptides can be used as a probe or to modulate the expression of the polypeptides. AAA066241 to AAA06691 and AAAV82000 tepresent sequences used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120

The invention is useful for inhibiting the development of prostate cancer in a patient. The invention is also useful as markers for diagnosing prostate cancer and for monitoring diseases progression in patients. The present nucleic acid sequence represents a DNA sequence that is part of a gene encoding a human prostate tumour protein

The present invention describes polynucleotide sequences (I) which encode prostate-specific proteins (II). (I) and (II) have cytostatic activity, and can be used in vaccine production and gene therapy. (I), (II), and isolated to the production proteins (I), and isolated T cells prepared using (I) or (II) are used treat cancer in a patient. (I) and the progress are also used in the detection of cancer in a patient. The cancer that is diagnosed or treated is particularly prostate cancer. (I) and (II) can be used in vaccines. The antibodies or (I) can be used for monitoring the progression of cancer in a patient. (I) and (II) can also be used to improve diagnostic and therapeutic methods for prostate cancer. They can indicate the level of metastasis as well as the prostate column the AMH9337 to AMH9344 and AAMO1115 to AAMO1318 represent

The invention relates to isolated prostate-specific polynucleotides, polypeptides, fusion proteins of the polypeptides, antibodies raised against the polypeptides (or antigenic epitopes derived from them) and antigen-presenting cells expressing the polypeptides. The antibodies are useful for detecting the presence of cancer, especially prostate cancer. The polypeptides, polynucleotides and the antigen-presenting cells are protein, and for inhibiting the development of cancer especially prostate cancer. Compositions comprising the polynucleotide and/or polypeptide are useful for stimulating an immune response, and for treating cancer. The oligonucleotide is useful for detecting cancer. The polygoucleotide is useful for detecting cancer. The polygoucleotide is useful for detecting cancer. The polygoucleotide is useful for detecting cancer. The prostate specific polynucleotide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            61 crerecrarecrecereacricesesececereracianes 120

                                                                                                                                                                                               8
                                                                                                                                                                                                                    The present invention describes an isolated polypeptide (P1) comprising at least an immunogenic portion of a prostate-specific protein, or its variant. Also described are polymucleotides (N1) encoding (P1). (P1) and (N1) have cytostatic activity and can be used in vaccine production. The polypeptides, nucleic acids and antibodies from the present invention are useful in the diagnosis and therapy of prostate cancer. Prostate specific genes P704P, P774P, P775P and 8305D are located in a genomic region on chromosome 22q11.2 known as the Cat Eye Syndrome region. AAH84G71 to AAH85143 and AAG99000 to AAG99077 represent polymucleotide and polypeptide sequences used in the exemplification of the present

The present invention provides prostate-specific coding sequences and their encoded proteins. These can be used in the diagnosis and treatment of cancers, particularly prostate cancer. The present sequence is a cDNA described in the invention
                                                    cancer; vaccine; cytostatic; immunostimulant;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New prostate-specific polynucleotides for diagnosing and treating diseases, in particular prostate cancer, and as markers for the progression of cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Dillon DC, Mitcham JL, Harlocker SL, Jiang Y, GR, Retter MW, Stolk JA, Day CH, Vedvick TS, Wang A, Skeiky YAW, Hepler WT, Henderson RA;
                         Human F1-12 cDNA sequence SEQ ID NO 107.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 1; SEQ ID NO 107; 87pp; English.

The invention relates to a method of detecting prostate cancer by contacting a biological sample from a patient with: (a) a binding agent that binds to a polypeptide having an immunogenic portion of a prostate protein or its variant; (b) 2 oligomocleotide primers, where 1 of the oligomocleotides is specific for a DNA encoding the polypeptide of (a); or (c) an oligomocleotide probe specific for a DNA molecule encoding the polypeptide of (a). The method and polypeptides are useful for diagnosing, treating, particularly by immunocherapy, monitoring the progression, and inhibiting the development of prostate cancer in a patient. The polypeptides may be used to generate antibodies useful for the diagnosis and monitoring of prostate cancer. ABSSB10-ABSSB146
                                                                                          Detecting prostate cancer comprises contacting a sample with an agent capable of binding to a polypeptide with an immunogenic portion of a prostate protein, oligonucleotide primers or a probe specific for DNA encoding the polypeptide.
                                                                                                                                                                                                                    Claim 1; Page 59-60; 111pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to novel prostate-specific proteins (PSP) and their coding sequences. The PSPs and their coding sequences are useful for stimulating an immune response in a patient, or for treating prostate cancer in a patient and for determining, detecting or diagnosing the presence of a cancer in a patient. The present sequence was used to

The invention relates to an isolated polypeptide comprising no more than CC The invention relates to an isolated polypeptide comprising a sequence ADB14487. The peptides comprise a fragment ADB1363 of that contain naturally processed T-cell epitopes for 3 class I major histocompatibility complex (MHC) alleles. ADB13653 is a polypeptide encoded by a human prostate specific CDNA, one of 648 disclosed as new. Also included are nucleic acids encoding the proteins and peptides, expression vectors, a host cell cTansformed with the vector, an isolated antibody (or antigen binding CT ransformed with the vector, an isolated antibody (or antigen binding GT fragment) that specifically binds to the protein or peptide, detecting the presence of a cancer in a patient (comprising contacting a patient sample with a binding agent that binds to the peptides or a polypeptide cappearing as ADB1355, detecting the amount of polypeptide that binds to off value to determine the presence of cancer), a fusion protein comprising the presence of acancer in a petient comprising the presence of cancer in a petient comprising administering a contacting T cells with the peptides or the isolated T cell population, treating prostate cancer in a patient and treating prostate cancer in a patient and treating prostate cancer in a patient and treating prostate cancer in a patient the T cells proliferate, and administering the cancer in a patient. The peptides or antigen presente of cancer in a patient. The peptides (or an incleic acids encoding, or muleic acids not cleic acids encoding them), is used to detect the captering calls proliferate, and administering che expressing the nucleic acids are used to cancer in a patient. The peptides, mucleic acids are seed to stimulate an immune response or treat presented thuman prostate specific connect in electronic format directing connect in a patient. The peptides or treat prostate cancer in a patient. The present sequence is one of the condicated, the sequence data for this patient endomediation or trea
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            61 CTGTGCTATGGTCCTGGCTGACTTCGGGGGGGGGGTGGTACGCGTGGACCGGCCCGGCTC 120

polynucleotides encoding prostate specific polypeptides isolated iman prostate tumor cDNA library are useful to diagnose and treat cancer particularly prostate cancer New polyna human

Example 1; SEQ ID NO 107; 99pp; English.

The invention relates to human prostate-specific polypeptides and the polymucleotides encoding them. The invention also relates to an isolated antibody or its antiger-binding fragment that specifically binds a polypeptide of the invention, a method of detecting cancer in a patient comprising contacting a biological sample of the patient with an agent that binds a prostate-specific polypeptide and comparing the amount of bound polypeptide comparated to a predetermined cut-off value and a fusion protein comprising a prostate-specific polypeptide. The sequences of the invention are used to diagnose and treat cancer, particularly prostate cancer. This sequence represents cDNA encoding a human prostate-specific polypeptide of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly from USPTO at seqdata.uspto.gov/sequence.html.

//folone_lone will primed with oligo(dfl) 70 50 mg of brand of the limed with oligo(dfl) 70 50 mg of brand total collular RNA obtained from 5,000-10,000 microdissected, histologically normal prostate epithelial cells. Double-stranded cDNA was prostate to Eccal adaptors, 5 cycles of PCR applied to the CDNA with an adaptor-specific primer, and the resulting PCR product subcloned into pAMPIO by the UDG-cloning
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This read is a RESEQUENCE of a previously sequenced human clone original clone citation: National Cancer Institute, Cancer Genome Anatomy Project (CGAP), Tumor Gene Index This read has been varified (found to hit its original self in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  237

/note="Vector: pAMP10; Site=1: Not1; Site=2: EcoRI; lst strand cDNA was primed with oligo(dT)17 on 50 ng of DNAse-treated, total cellular RNA obtained from 5,000-10,000 microdissected, histologically normal prostate epithelial cells. Double-stranded cDNA was ligated to EcoRI adaptors, 5 cycles of PCR applied to the CDNA with an adaptor-specific primer, and the resulting PCR product subcloned into pAMP10 by the UDG-cloning method (Life Technologies). Average insert size is 600 bp. NOTE: Not directionally cloned. This library was constructed by David Krizman."

/note="Vector: plane1"; Site_1: Not1; Site_2: EcoRI; lst
strand_cDNA was primed with oligo(d7)7 on 50 mg of
DNAse-treated, total cellular RNA obtained from
5,000-10,000 microdissected, histologically normal
prostate epithelial cells. Double-stranded cDNA was
ligated to EcoRI adaptors; S. cycles of PCR applied to the
CDNA with an adaptor-specific primer, and the resulting
PCR product subcloned into pAMP10 by the UDG-cloning
method (Life Technologies). Average insert size is 600
bp. NOTE: Not directionally cloned. This library was
constructed by David Krizman."
